

5 reasons to go "touchless"

PRACTICE SOCIAL DISTANCING FROM GERMS

Here's why touch-free wins high marks.

1.

Hands-free solutions work double-time.

Automatic towel and skincare dispensers, sinks, and toilets reduce cross-contamination and score points with visitors who prefer touchless options.

2.

You conserve energy and resources.

Touchless dispensers reduce waste and refill maintenance time, yielding savings that benefit your bottom line.

3.

Ease public restroom fears.

Touchless solutions make it easier for you to live up to the new hygiene standards and make visitors feel safe.

4.

Touchless technology continues to innovate.

There are more touch-free solutions than ever before, including budget-friendly options.

5.

Convenience drives compliance.

No one wants to touch germ surfaces, so giving people a sanitary, touchless option leads to more handwashing.

Did you know?

Hand dryers can use speeds of **370 mph**—spreading pathogens into the air to linger for 15 minutes. Choose towels instead!

Bring touchless to your facility

With the right "touch," our advisors help you navigate the best touch-free solutions that fit your budget.
